EXPERIMENT 13:Create a Virtual Machine with 1 CPU, 2GB RAM and 15GB Storage Disk

Aim

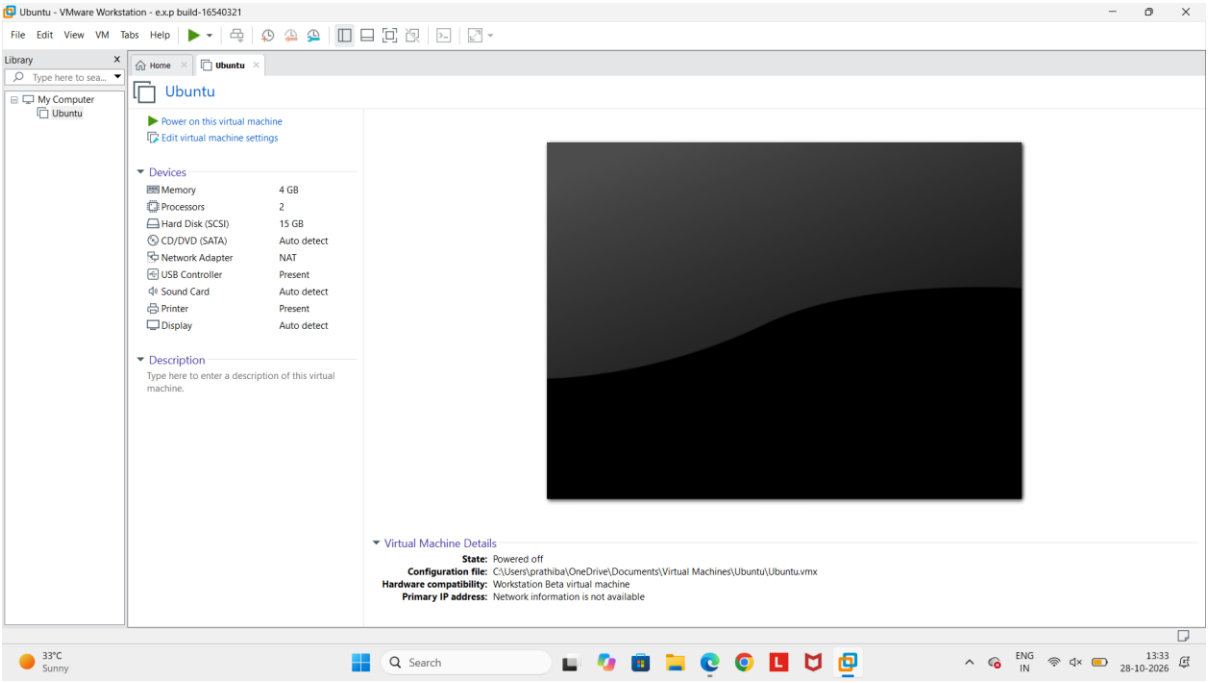

To create and configure a Virtual Machine using Type-2 Virtualization Software (Oracle VM VirtualBox) with the following specifications:

- CPU: 1 Processor
- RAM: 2 GB (2048 MB)
- Storage Disk: 15 GB

Procedure

1. Download and install Oracle VM VirtualBox on the host operating system.
2. Open Oracle VM VirtualBox.
3. Click on the New option to create a new Virtual Machine.
4. Enter the Virtual Machine name (e.g., Ubuntu VM).
5. Select the operating system type and version.
6. Choose the ISO image file if an operating system installation is required.
7. Allocate 2048 MB (2 GB) RAM to the Virtual Machine.
8. Select 1 CPU under the processor configuration.
9. Choose Create a Virtual Hard Disk Now.
10. Select the VDI (VirtualBox Disk Image) file type.
11. Choose Dynamically Allocated as the storage type.
12. Set the virtual hard disk size to 15 GB.
13. Click Finish to complete the Virtual Machine creation.
14. Select the newly created Virtual Machine and click Start.
15. Verify that the Virtual Machine is configured with the specified CPU, RAM and storage.

IMPLEMENTATION

Result

Thus, a Virtual Machine was successfully created using Oracle VM VirtualBox (Type-2 Hypervisor) with 1 CPU, 2 GB RAM and 15 GB virtual storage disk.
