15. Create a Snapshot of a Virtual Machine and Test It

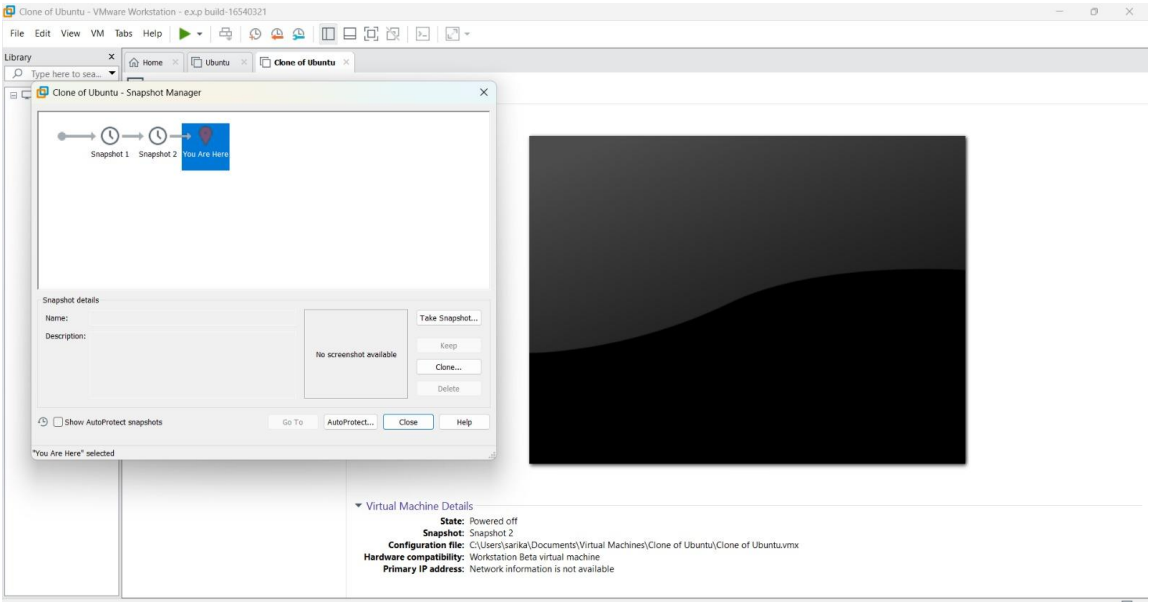

Aim:

To create a snapshot of a virtual machine and test it by restoring the previous version.

Procedure:

1. Open VMware Workstation and start the virtual machine.
2. Install or configure the required operating system.
3. Make sure the virtual machine is in the desired state.
4. Select the virtual machine from the VMware Workstation interface.
5. Click VM → Snapshot → Take Snapshot.
6. Enter a suitable name and description for the snapshot.
7. Click Take Snapshot to save the current state.
8. Make some changes to the virtual machine, such as creating or deleting a file.
9. Select VM → Snapshot → Revert to Snapshot or use the Snapshot Manager to restore the saved snapshot.
10. Verify that the virtual machine has returned to its previous saved state.

Output:

Result:

Thus, a snapshot was successfully created for the virtual machine, and the previous state was restored and tested using VMware Workstation.
